

What is claimed is:

1. A button fastener comprising:
a base with a bottom surface; and
a plurality of legs connected to the base,
wherein the plurality of legs extends from the bottom surface of the base; and
wherein each leg of the plurality of legs is able to pass through a button hole.
2. The fastener of claim 1, wherein each leg of the plurality of legs is able to pass through a fabric.
3. The fastener of claim 1, wherein the base is in the shape of a ring.
4. The fastener of claim 1, wherein the base is in the shape of a flat plate.
5. The fastener of claim 1, wherein the plurality of legs is 2 legs.
6. The fastener of claim 1, wherein the plurality of legs is 3 legs.
7. The fastener of claim 1, wherein the plurality of legs is 4 legs
8. The fastener of claim 1, wherein the base includes a top surface with a coating.
9. The fastener of claim 8, wherein the coating is colored.
10. The fastener of claim 8, wherein the coating has a pattern.
11. The fastener of claim 8, wherein the coating is colored and has a pattern.
12. The fastener of claim 1, further comprising a cover to fit over a distal end of each of the plurality of legs.

13. A button fastener comprising:
 - a base with a bottom surface;
 - a plurality of legs connected to the base; and
 - a cover to fit over a distal end of each of the plurality of legs,wherein the base includes a top surface with a coating;
wherein each leg of the plurality of legs extends from the bottom surface of the base; and
wherein each leg of the plurality of legs is able to pass through a button hole.
14. The fastener of claim 13, wherein each leg of the plurality of legs is able to pass through a fabric.
15. The fastener of claim 13, wherein the coating is colored.
16. The fastener of claim 13, wherein the coating has a pattern.
17. The fastener of claim 13, wherein the coating is colored and has a pattern.
18. A method for manufacturing a button fastener comprising:
 - providing a base with a bottom surface; and
 - connecting a plurality of legs to the base, wherein each of the plurality of legs extends downward from the bottom surface of the base;wherein each leg of the plurality of legs is able to pass through a button hole; and able to pass through a fabric.

19. A method of attaching a button to a piece of fabric, comprising:
- placing a button at a selected location on a piece of fabric;
 - placing a fastener comprising a base with a bottom surface; and a plurality of legs connected to and extending downward from the bottom surface of the base; wherein each leg of the plurality of legs is able to pass through one of a plurality of holes of a button and then is able to pass through a fabric;
 - guiding each of the plurality of legs through at least one of the plurality of holes of the button;
 - forcing each of the plurality of legs to pass through the piece of fabric; and
 - bending each of the plurality of legs such that the plurality of legs lay near a surface of the fabric.
20. The method of claim 19 further comprising placing a cover capable of fitting over a distal end of a leg.
